

What Does Your Child Eat?

Guidelines for Diet and Nutrition Screening for Children Ages Birth Through Eight Years

This tool helps to identify the child's risks for nutrition-related problems that may affect his/her growth and development.

Is the child being breastfed and/or formula fed with the recommended frequency and amounts?

Is the child started on solid foods at the recommended age and learning to eat and drink by himself as he/she gets older?

Is honey or Karo Syrup being given to the child during the first year?

The "Office Use" section identifies feeding milestones and key nutrition concerns to guide the staff to provide needed counseling and/or referral.
