WORK DONE SO FAR

Held two out of four scheduled meetings

- Meeting #1 - Care Management and Coordination of Services
- Meeting #2 - Utilization and on Performance Standards and Monitoring

Key Points from the discussion include:

- Managed care plans have experience and infrastructure to serve the SPD population.
- Plans/systems of care should adjust to meet the needs of the SPD population.
- Systems of care should be enhanced in the following ways:
  - Implement CHCF “essential” recommendations & medical home
  - Provide care coordination that considers the overall well being
  - Adjust to meet the medical, cultural and linguistic and behavioral needs
  - Ensure Provider Network adequacy with periodic review.
WORK STILL TO BE DONE

- Access, continuity and provider network adequacy standards
- Data to determine where the targeted FFS population currently receives care.
- Alternative systems of care for SPD populations
KEY QUESTION

How will we measure success for SPD populations enrolled in managed care or organized systems of care?
