Fishbone Diagram
Process failure for Prevention of Hospital-Acquired Infection Diagnosis

- **Procedures/Methods**
  - Inadequate procedure for prep of blood culture bottle prior to entry
  - Inadequate procedure for skin prep prior to drawing peripheral blood cultures
  - Inadequate procedure for obtaining blood specimens from the vascular line
  - Inconsistent utilization of the CDC stds for diagnosing and classifying hospital-acquired infections
  - Inadequate personnel training re obtaining samples
  - Inconsistent use of techniques specified in P&P for obtaining samples
  - Misattribution of source(s) of infection

- **Equipment**
  - Contaminated blood culture media
  - Delay in transporting specimens to lab
  - Inadequate or inconsistent administrative support

- **Materials**
  - Use of skin disinfectants other than CHG or PI
  - Inadequate tracking/trending of false-positive cultures

- **People**
  - Inadequate or inconsistent administrative support

- **Environment**
  - Inadequate or inconsistent administrative support

- **Miscellaneous**
  - Inadequate or inconsistent administrative support
