**Note: The pattern above is two underscores (__), the aid code, and then a percent sign. This is telling Business Objects that the first two characters can be anything; the third and fourth digit has to be the specific aid code you choose; and the percent sign means you don't care what is at the end of the number.

This can also be used to find a specific aid code in the County ID (you could run a count of all kids with aid code 60).
