

DHCS COVID-19 Vaccine Administration

Beneficiary FAQs

March 29, 2021

With the recent federal approval of COVID-19 vaccines, the Department of Health Care Services (DHCS) is seeking federal approval to help support delivery of the vaccine to all Medi-Cal beneficiaries. The vaccine will be provided at no cost to all Californians.

DHCS will follow [California's COVID-19 vaccination plan](https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/COVID-19/Vaccination-Plan.aspx), which was approved by the California Department of Public Health (CDPH). It calls for implementation in several phases: Pre-vaccine; limited doses available; larger number of doses available; and sufficient supply of doses available for the entire population. For further information on the state's vaccination planning efforts please visit <https://covid19.ca.gov/vaccines/>.

California is leveraging its existing immunization framework and emergency response infrastructure to coordinate efforts among state, local, and territorial authorities to administer the vaccine. Throughout this effort, DHCS will share appropriate information with you and our providers, health plan partners, counties, and other key stakeholders.

To address beneficiary inquiries regarding the COVID-19 vaccination in Medi-Cal, these Frequently Asked Questions (FAQs) have been developed.

For further information on the state's vaccination planning efforts please visit <https://covid19.ca.gov/vaccines/>.

1. What individuals are covered to get the vaccine?
2. Will individuals have to pay for the vaccine?
3. Where can individuals get the vaccine?
4. When can individuals get the vaccine?
5. Is the vaccine safe?
6. What does Emergency Use Authorization mean for a vaccine?
7. How will safety be tracked once a COVID-19 vaccine is made available to the public?
8. Is the vaccine helpful? I heard getting COVID-19 gives you better and longer immunity than the protection a vaccine can give. Can it actually make my illness worse if I do end up getting COVID-19?
9. Are there side effects associated with the vaccine?
10. Can the vaccine give me COVID-19?
11. Will there be any long-term side effects?
12. How many shots will be needed?
13. If I have already had COVID-19 and recovered, do I still need to get vaccinated with the vaccine?
14. Do I need to wear a mask and avoid close contact with others if I have received 2 doses of the vaccine?
15. I have heard about herd immunity. What is it?
16. What percentage of the population needs to get vaccinated to have herd immunity to COVID-19?
17. What is the risk of children getting sick with COVID-19?
18. How will vaccinations work for children? Can my child get a COVID-19 vaccine?
19. Can I take the COVID vaccine and the flu vaccine (or another vaccine) at the same time?
20. How long does it take to be protected after vaccination?
21. If I have previously tested positive for COVID-19, can I still get the vaccine?

22. Who can I contact for more information?
23. Where do I find general California guidance on COVID-19?

1. What individuals are covered to get the vaccine?

- A. All full-scope Medi-Cal beneficiaries are covered and will receive the vaccine at no cost. Coverage is also extended to people enrolled in restricted-scope Medi-Cal; the COVID-19 Uninsured Group Program; and the Family Planning, Access, Care, and Treatment (FPACT) program.

2. Will individuals have to pay for the vaccine?

- A. No. The vaccine is being purchased by the federal government and will be provided to individuals at no cost.

3. Where can individuals get the vaccine?

- A. Pharmacies, retail clinics, providers (including those enrolled in managed care plans), and any other sites of care receiving and administering COVID-19 vaccinations. Due to supply constraints, the vaccine will initially be rolled out in phases that include certain defined populations.

Additional information can be found on the CDPH website:

<https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/Immunization/COVID-19Vaccine.aspx>

4. When can individuals get the vaccine?

- A. California's plan for administering the vaccine is split into phases. Moving forward, there will be a single statewide standard and movement through the tiers. The state will continue through 65+, health care workers, and prioritize emergency services, food and agriculture workers, teachers and school staff. From there, the state will transition to age-based eligibility. More details on those phases, including who is covered in each one, and on the vaccination roll-out in general are available on the vaccination section of the California for All COVID-19 website:

<https://covid19.ca.gov/vaccines/>.

The "My Turn" website tells Californians if they qualify to get the COVID vaccine and schedule appointments. Users submit information about their age and COVID-related factors and can sign up to be notified over text or email when it's their turn to get vaccinated and then schedule appointments. This is currently available in Los Angeles and San Diego Counties only but a statewide roll-out is expected early next month.

Additional information can be found here: <https://myturn.ca.gov/>

5. Is the vaccine safe?

- A. COVID-19 vaccines were tested in large clinical trials to make sure they meet safety standards. Many people were recruited to participate in these trials to see how the vaccines offer protection to people of different ages, races, and ethnicities, as well as those with different medical conditions.

The Food and Drug Administration (FDA) has reviewed the vaccines for their safety and effectiveness before granting Emergency Use Authorization (EUA) for their use. The U.S. Centers

for Disease Control (CDC) and its Advisory Committee for Immunizations (ACIP) has also reviewed the safety information of the approved vaccines.

In addition, California formed a [Scientific Safety Review Work Group](#) to independently review the safety and efficacy of the vaccines. Based on all these reviews, the vaccine is considered safe for use in Californians. Please refer to the [CDPH COVID 19 Questions and Answers](#) page for additional details.

FDA and CDC will continue to monitor the safety of COVID-19 vaccines to make sure even very rare side effects are identified. Health care providers are required to report certain adverse events following vaccination to the Vaccine Adverse Event Reporting System (VAERS).

CDC is also implementing a new smartphone-based tool called v-safe to check in on people's health after they receive a COVID-19 vaccine. When you receive your vaccine, you should also receive a v-safe information sheet telling you how to enroll in v-safe. If you enroll, you will receive regular text messages directing you to surveys where you can report any problems or adverse reactions you have after receiving a COVID-19 vaccine.

Additional information can be found here: <https://covid19.ca.gov/vaccines/>

6. What does Emergency Use Authorization mean for a vaccine?

- A. In certain types of emergencies, such as with the current public health emergency, the FDA can issue an emergency use authorization, or EUA, to provide more timely access to critical medical products that may help during the emergency when there are no adequate, approved, and available alternative options.

Under the EUA authority, the FDA evaluates requests for authorization very quickly using the evidence that is available, carefully balancing the risks and benefits of the product as we know them, in addition to evaluating other criteria. EUAs are in effect until the emergency declaration ends but can be revised or revoked as needs change during the emergency, or as products meet the criteria to become approved, cleared, or licensed by the FDA.

Additional information can be found here: <https://covid19.ca.gov/vaccines/> and [CDPH COVID-19: Information for Laboratories](#)

7. How will safety be tracked once a COVID-19 vaccine is made available to the public?

- A. After a vaccine is approved for use via Emergency Use Authorization (EUA), scientists and health professionals will continue to carefully monitor its use. The [Vaccine Safety Datalink](#) in the United States, which monitors many immunizations in California, is designed to report a safety problem in near real time so the public can be informed quickly of possible risks. Health care providers are required to report certain adverse events following vaccination to the [Vaccine Adverse Event Reporting System \(VAERS\)](#).

When you receive your vaccine, you will also receive an information sheet telling you how to enroll in a program called [v-safe](#) that allows you to report problems or adverse reactions you have after receiving a COVID-19 vaccine to the Centers For Disease Control (CDC). Additionally, the Food and Drug Administration (FDA) and CDC will continue to carefully monitor the safety of COVID-19 vaccines to make sure that even very rare side effects are identified as early as possible. These are some of the ways that will help detect previously undetected issues related to the vaccines as early as possible.

8. Is the vaccine helpful? I heard getting COVID-19 gives you better and longer immunity than the protection a vaccine can give.

- A. COVID-19 vaccines prevent you from getting sick from COVID-19. If you get COVID-19, you risk becoming very sick and giving it to loved ones who may get very sick. Getting a COVID-19 vaccine is a safer choice.

The ability of COVID-19 vaccines to protect us from spreading the virus to others is not yet known but is being studied carefully.

More detailed questions should be directed to your health care provider.

Even after being vaccinated, people will still need to practice other precautions, like wearing a mask, social distancing, handwashing, and other hygiene measures, until public health officials say otherwise.

Additional information can be found here: <https://covid19.ca.gov/vaccines/>

9. Are there side effects associated with the vaccine?

- A. Most people do not have serious problems after being vaccinated for COVID-19. Any minor symptoms usually go away on their own within a week. Providers will provide information and explain any potential side effects that can be expected with vaccination.

Additional information can be found here: <https://covid19.ca.gov/vaccines/>

10. Can the vaccine give me COVID-19?

- A. No, the vaccine cannot give you COVID-19 because it does not contain infectious virus.

Additional information can be found here: <https://covid19.ca.gov/vaccines/>.

11. Will there be any long-term side effects?

- A. COVID-19 vaccines are being tested in large clinical trials to assess their safety. However, it does take time, and more people will need to be vaccinated before we learn about very rare or long-term side effects. That is why safety monitoring will continue. The CDC has an independent group of experts that reviews all the safety data and provides regular safety updates. If a safety issue is detected, immediate action will be taken to determine if the issue is related to the COVID-19 vaccine and determine the best course of action.

12. How many shots will be needed?

- A. The number of shots will vary depending on which vaccine you receive.
- Two [Pfizer-BioNTech](#) vaccine doses should be given 3 weeks (21 days) apart.
 - Two [Moderna](#) vaccine doses should be given 4 weeks (28 days) apart.

- Johnson & Johnson's Jansen ([J&J/Janssen](#)) COVID-19 vaccine requires only one dose.

If you receive a vaccine that requires two doses, you should **get your second shot as close to the recommended interval as possible**. However, your second dose may be given up to 6 weeks (42 days) after the first dose, if necessary. You should **not** get the second dose earlier than the recommended interval.

Your health care provider will advise you when you should return for the second shot, as it varies by type of vaccine as shown above.

Additional information can be found here: <https://covid19.ca.gov/vaccines/> and <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/index.html>

13. If I have already had COVID-19 and recovered, do I still need to get vaccinated with the vaccine?

- A. Yes. There is not enough information currently available to say if or for how long after infection someone is protected from getting COVID-19 again; this is called natural immunity. Early evidence suggests natural immunity from COVID-19 may not last very long, and more studies are ongoing. Available evidence from clinical studies shows that the vaccine is safe in persons who have had prior COVID-19 infection or who have tested positive for it.

Additional information can be found here: <https://covid19.ca.gov/vaccines/>

14. Do I need to wear a mask and avoid close contact with others if I have received 2 doses of the vaccine?

- A. Yes. While experts learn more about the protection that COVID-19 vaccines provide under real-life conditions, it remains important for everyone to continue using all the tools available to help stop the spread of COVID-19, including covering your mouth and nose with a mask, washing hands often, staying at least 6 feet away from others and avoiding crowded places.

Additional information can be found here: <https://covid19.ca.gov/vaccines/>

15. I have heard about herd immunity. What is it?

- A. [Herd immunity](#) is a term used to describe when enough people within a population have protection—either from previous infection or vaccination—that disease spread slows and eventually stops within that population. As a result, everyone within the community is protected even if some people don't have any protection themselves.

16. What percentage of the population needs to get vaccinated to have herd immunity to COVID-19?

- A. Experts do not know what percentage of people would need to get vaccinated to achieve herd immunity to COVID-19. The percentage of people who need to have protection in order to

achieve herd immunity varies by disease. At this time during the pandemic, we cannot rely on herd immunity to protect us from getting COVID.

17. What is the risk of children getting sick with COVID-19?

- A. Children can be infected and get sick with COVID-19. Most children with COVID-19 have mild symptoms, or they may have no symptoms at all, which is known as being asymptomatic.

Fewer children have been sick with COVID-19 compared to adults. However, infants (children less than 1 year old) and children with certain underlying medical conditions might be at increased risk for COVID-19. For further information, please consult your child's health care provider.

18. How will vaccinations work for children? Can my child get a COVID-19 vaccine?

- A. The [Advisory Committee on Immunization Practices \(ACIP\)](#) recommends that 1) health care personnel and 2) residents of long-term care facilities be offered vaccination in the initial phase of the COVID-19 vaccination program. COVID-19 vaccination will be made available for children later in the vaccine roll-out process. The Pfizer-BioNTech COVID-19 vaccine has Emergency Use Approval (EUA) approval for ages 16 and above. In early clinical trials for various COVID-19 vaccines, only non-pregnant adults participated. However, clinical trials continue to expand those recruited to participate. The groups recommended to receive the vaccines could change in the future.

19. Can I take the COVID vaccine and the flu vaccine (or another vaccine) at the same time?

- A. It is currently recommended that you not get any other vaccination for a minimum of 14 days prior to or after getting the COVID-19 vaccine. Please discuss this further with your health care provider.

20. How long does it take to be protected after vaccination?

- A. Although protection from the vaccine is not immediate, the first shot starts building protection. Currently available vaccines require a two dose series, and it will take one-to-two weeks following the second dose to get the most protection the vaccine can offer.

21. If I have previously tested positive for COVID-19, can I still get the vaccine?

- A. People who have previously tested positive for or been sick with COVID-19 but have now recovered may still benefit from getting vaccinated.

People are advised to get a COVID-19 vaccine even if they have been sick with COVID-19 before.

Additional information can be found here: <https://www.cdc.gov/vaccines/covid-19/hcp/faq.html>

At this time, we do not know how long someone is protected from getting sick again after recovering from COVID-19. Please consult your health care provider for additional guidance.

22. Who can I contact for more information?

- A. If you receive your care from a Medi-Cal health plan and have questions, please call your [managed care plan](#).

For clinical questions please contact your provider.

For all other questions please contact the Medi-Cal Member Help Line: (800) 541-5555; TTY (800) 430-7077), Monday through Friday, 8 a.m. to 5 p.m. You may also call the Medi-Nurse Advice Line: (877) 409-9052.

23. Where do I find general California guidance on COVID-19?

- A. There are two California websites that offer general guidance on COVID-19. These are the State of California Coronavirus Response website and the California Department of Public Health website. Check both websites frequently, as resources are regularly updated and added. Below are the web addresses of each.

- The California Coronavirus Response website is: [covid19.ca.gov](https://www.cdph.ca.gov/Programs/CID/DCDC/Pages/Immunization/COVID-19Vaccine.aspx).
- The California Department of Public Health website is: [cdph.ca.gov/COVID19](https://www.cdph.ca.gov/COVID19)
