ABSTRACT

This report provides summary data on the number of fee-for-service Medi-Cal funded abortions performed during 2002, the type of facility where a procedure was performed, and Medi-Cal expenditures for these procedures. Only abortion claims received and processed for date-of-service January through December 2002 are included in this report. The term fee-for-service (FFS) used throughout this report refers to these claims. The data are presented at both county and state levels. *Estimates* of abortions for enrollees in Health Care Plans (HCP) are included since encounter data are not yet available. A distribution by county is provided.

This report, as well as previous years' reports, may be found at www.dhs.ca.gov/mcss.

Questions regarding data provided in this report and any other inquiries regarding Medi-Cal funded induced abortions may be directed to Jan Rains at (916) 552-8570 or JRains@dhs.ca.gov.

March 2004

HIGHLIGHTS

- Medi-Cal funded a total of 53,905 fee-for-service (FFS)¹ abortions² in 2002 and paid an average of \$364 per procedure, totaling \$19,619,900 for all abortions.

There were an estimated 36,135 abortions for enrollees in HCPs, excluding San Mateo and Santa Barbara, which have been submitting encounter claims for several years and are included with FFS in this report.
- The average monthly rate of abortions per 1,000 FFS eligible women aged 15-44 years was 6.09.
- Just over one-third, 34 percent, of Medi-Cal funded abortions were performed for women 20-24 years old.
- Race/ethnicity was not reported for 36 percent of the women receiving a Medi-Cal fee-for-service funded abortion. Abortion services to Hispanic females accounted for 30 percent of total FFS abortions, while White women were the second largest group at 20 percent.
- The “Families” aid category received the largest number of abortions, representing 33 percent of the total. The second largest group was the “Presumptive Eligible” category at 20%. The undocumented alien eligible women were 16 percent of FFS abortions, down from 17 percent in the previous year.
- Over half of the abortions, 52 percent, were done at a physician’s office, averaging 34 abortions per office location.
- The cost of an abortion performed on a hospital inpatient basis averaged \$2,775 per abortion. Abortions done at a physician’s office averaged \$327 per abortion, and clinics had the lowest average cost, \$321.
- The number of Medi-Cal eligible women who received abortion services was 51,551, a seven percent increase above calendar year 2001. Ninety-six percent of these women had only one abortion.

1 The term fee-for-service in this report refers to all abortion claims received and processed by the Medi-Cal fiscal intermediary for date-of-service January through December 2002, regardless of the enrollment plan.

2 The term abortion as used in this report refers to induced abortions only.

INTRODUCTION

The number of induced abortions funded by Medi-Cal during 2002, on a FFS basis, was 53,905, 9 percent higher than in 2001. The average cost per abortion also rose from \$322 to \$364 in calendar year 2002, a 13 percent jump. These factors combined to boost Medi-Cal payments for these abortions 23 percent above the 2001 level. The average monthly rate of abortions per 1,000 FFS eligible women 15-44 years rose to 6.09, after bottoming in 2001 at 5.75. Despite the current year's increase, the average monthly rate has dropped substantially during the past decade, from a high of 10.01 in 1989.

The abortion rate for enrollees in Medi-Cal managed care plans is also assumed to have declined from the pre-managed care base years of 1991-1993. However, because of increased enrollment figures and aid-category specific adjustments, the projected abortions to Medi-Cal enrollees in health care plans (HCP) are 1,325 higher than last year. In 2002, there were an estimated 36,135 abortions provided to HCP enrollees, bringing the total estimated Medi-Cal funded induced abortions to 90,040.

Unfortunately, the total number of abortions for California women is unknown. This report, which encompasses services to Medi-Cal beneficiaries only, is based on a paid claims database and estimates from Medi-Cal managed care enrollment data.

Data Qualifications

This report discusses induced abortions that occurred during calendar year 2002 and appear on the Medi-Cal paid claims file between January 2002 and September 2003. The 21-month file was used to allow for delays in submitting or processing claims.

Abortions performed for enrollees in health care plans (HCP), otherwise known as managed care, are included in this report only as estimates. Encounter claims for these HCPs, excluding San Mateo and Santa Barbara, are reported on a sporadic basis with an unknown level of completeness. Due to the limited reporting, it is not known exactly how many abortions these plans provided during 2002.

Beginning with the 1999 report, a revised methodology for estimating abortions provided by HCPs was developed due to information on trends in abortion rates by aid category over the past decade.

The Department requires, for counties participating in managed care, that beneficiaries in selected aid categories be placed into HCPs. The aid codes for persons in these selected aid categories are referred to as “mandatory” aid codes. Although the abortion rates vary substantially by county, it was assumed that the **change** in rates from the base years prior to managed care (1991-1993) to the current year could be applied to counties without current year data. For example, the abortion rate for fee-for-service counties dropped 41 percent from the base years to calendar year 2002. This change in rate was applied to the base year rate for each of the managed care counties to project a current year abortion rate. The rate was then adjusted to reflect differing rates in the three major aid groups – Medically Indigent Children, Medically Needy Families, and Public Assistance Families. The estimates were derived by applying the projected abortion rates to the number of beneficiaries in the corresponding aid categories within each of the managed care counties. Table A displays these estimates by county.

To estimate the calendar year total Medi-Cal abortions, add the estimated 36,135 managed care abortions to the reported fee-for-service 53,905 abortions. This yields an estimated total of 90,040 abortions for Medi-Cal beneficiaries in 2002.

All Other Counties	0	11,158	11,158

Estimates were derived by applying the average change from base years 1991-1993 to current year 2002 in the abortion rates in "mandatory aid codes" for fee-for-service counties to the eligibility data in managed care counties.

The abortion rates used in developing the estimates of abortions provided to women in HCPs are as follows:

Yolo	8.5431	7.2293	4.8316	5.1566	5.0228

Medi-Cal FFS Eligibles, Induced Abortions and Expenditures

The average monthly number of FFS eligible women ages 15-44 climbed two percent from 2001 to 2002, while the number of abortions for the same group rose by nine percent.

The average monthly rate of abortions per 1,000 FFS eligible women continues a long-term downward trend despite a slight increase in calendar year 2002. This follows an all-time low of 5.75 in calendar year 2001.

As mentioned in Data Qualifications, the availability of data from HCP's is extremely limited, which contributes to the long-term downward trend in the number of reported abortion services; however, data from counties that are solely fee-for-service support the assumption there has also been a true decrease in the abortion rate.

For estimates of abortions provided to women enrolled in HCP's please see [Table A](#).

Quarterly 2002 Persons Certified Eligible, "Medi-Cal Services and Payments Report".

Distribution of Medi-Cal Funded Induced Abortions by Age and Ethnicity

Women ages 20-24 accounted for the highest percent of abortions among all ethnic groups, 34 percent.

During calendar year 2002, 36 percent of the women having a FFS supported abortion had no race/ethnicity category reported. Of the women with ethnicity reported, 47 percent were Hispanic, 31 percent were White, 15 percent were Black and 7 percent Asian. Although Hispanic women were disproportionately represented, this is most likely not a reflection of the ethnic distribution of women seeking abortions, but rather a result of the large number of Hispanic women eligible for emergency services as undocumented aliens. Women in these aid categories are provided services via the FFS system rather than through HCP's.

Prior to 1993, White women represented the highest percentage, followed by Black women.

Since 1990, the percentage of abortions for women of Asian and Pacific Islander origin to total abortions has fluctuated between four and five percent. Over the same time period, the percentage of abortions for women has dropped from 26.5 percent in 1990 to 10 percent in 2002.

Distribution of Medi-Cal Funded Induced Abortions by Age and Aid Category

Eligible women in the Families aid category (which includes CalWORKS and medically needy families) accounted for the highest percentage of Medi-Cal funded induced abortions, 33 percent; however, this aid category is the major component of managed care expansion, resulting in a declining representation in the FFS arena. Although the Families group still accounts for the greatest percentage of FFS abortions, the percent has dropped from 79 percent in 1994 to 33 percent in 2002.

The second largest group is the presumptive eligible category, which represented 20 percent of the FFS abortions, followed by undocumented alien women at 16 percent.

The minor consent and percent poverty aid categories each accounted for 12 percent of total FFS abortions.

Distribution of Medi-Cal Funded Induced Abortions by Type of Facility

During 2002, 52 percent of Medi-Cal funded abortions were performed at physicians' offices, followed by clinics, 37 percent. Abortions performed at clinics were the least costly. At an average cost of \$321 per abortion, it was \$6 less than the cost at a physician's office and \$263 less than the cost at a hospital outpatient department.

The overall FFS average cost per abortion rose to \$364 in 2002, from \$322 in the previous two years.

Even though only two-tenths of one percent of all abortions were performed at hospital inpatient departments, Medi-Cal payments for these abortions accounted for four percent of total Medi-Cal FFS abortion expenditures, averaging \$2,775 per abortion. The average cost per abortion, excluding those done in hospital inpatient departments, was \$352.

Medi-Cal Funded Induced Abortions 2002

The number of facilities providing abortion services decreased by seven in calendar year 2002, a one-half of one percent decline. Physician office locations where abortions were performed dropped by 41, while hospital outpatient facilities providing abortions increased by 27.

The average number of abortions performed in physicians' offices was 34, a thirteen percent gain above the previous year average of 30.

The number of clinics providing abortion services remained stable, adding only one facility. The number of abortions done at these facilities increased 22 percent from 16,290 in 2001 to 19,947 in 2002. The result is a corresponding 21 percent increase in the average number of abortions performed per clinic.

Frequency of Medi-Cal Funded Induced Abortions

During 2002, a total of 51,551 FFS eligible women had at least one abortion, which is a seven percent increase over calendar year 2001. Ninety-six percent of these women, 49,321, had only one abortion.

County Distributions of Medi-Cal Funded Induced Abortions

The following four tables display the distribution of abortion services by county. Individual county data do not necessarily reflect the same number and expenditure distributions that exist statewide.

Data provided in Tables 7, 8, 9, 10 and 13 are distributed by county of eligibility; i.e., the county that appears on the Medi-Cal card of the beneficiary. It should be noted that this is not necessarily the county of residence at the time of service, since a beneficiary could have moved from one county to another, and her eligibility might have been transferred at the time the service was rendered. Data in these tables may also include services performed outside California for a Medi-Cal beneficiary.

Data provided in Tables 11 and 12 are distributed by county of provider; i.e., county of occurrence.
