What is Multi-Factor Authentication (MFA)?

MFA is a two-factor authentication security method used to provider two or more forms of identification before granting access to an account or system.

Examples of identification include:

- Personal knowledge: passwords, knowledge-based answers, personal identification numbers (PIN), etc.
- Devices: mobile device, pin code, key fob, etc.
- Biometrics: fingerprint, retinal pattern, voice, etc.

MFA is essential for securing online accounts, particularly those containing sensitive information. MFA adds an extra layer of security protection and makes it more difficult for unauthorized users to access an account even if they have obtained or bypassed the password.

Enabling MFA for the California Electronic Visit Verification (CalEVV) Portal and Aggregator

Authentication can be validated by using one of the following methods to verify identity:

- Email address associated with your CalEVV user profile
- Google Authenticator application
- Microsoft Authenticator application

TWO-FACTOR AUTHENTICATION								
Welcome, your state payer program has chosen to require two-factor authentication.								
Please select authentication type:								
AUTHENTICATOR APP	EMAIL							
CANCEL								

MFA will be required:

- Every 12 hours regardless of activity, or
- Whenever a user logs into the CalEVV system from a new device

MFA Using Email

- 1. You will receive an email from <u>noreply@okta.com</u>.
 - Check your Spam/Junk folder
- 2. Open the email, scroll down to the one-time verification code.
- 3. Copy and paste the code into CalEVV MFA when prompted.
- 4. Click SUBMIT.
