

Improving Postpartum Care through Quality Improvement

Julia Logan, MD, MPH
Quality Officer

California Department of Healthcare Services

Using Data to Improve Maternity Care in California: Research
Collaborations and Future Opportunities

Sacramento, CA
June 19-20, 2014

Intro to the Adult Medicaid Quality Grant

Three main goals:

1. Testing and evaluation
2. Staff capacity
3. Quality improvement projects

DHCS Quality Improvement Projects

- Maternal health and diabetes management
- QI principles
- Collaboration

Postpartum Care: High priority

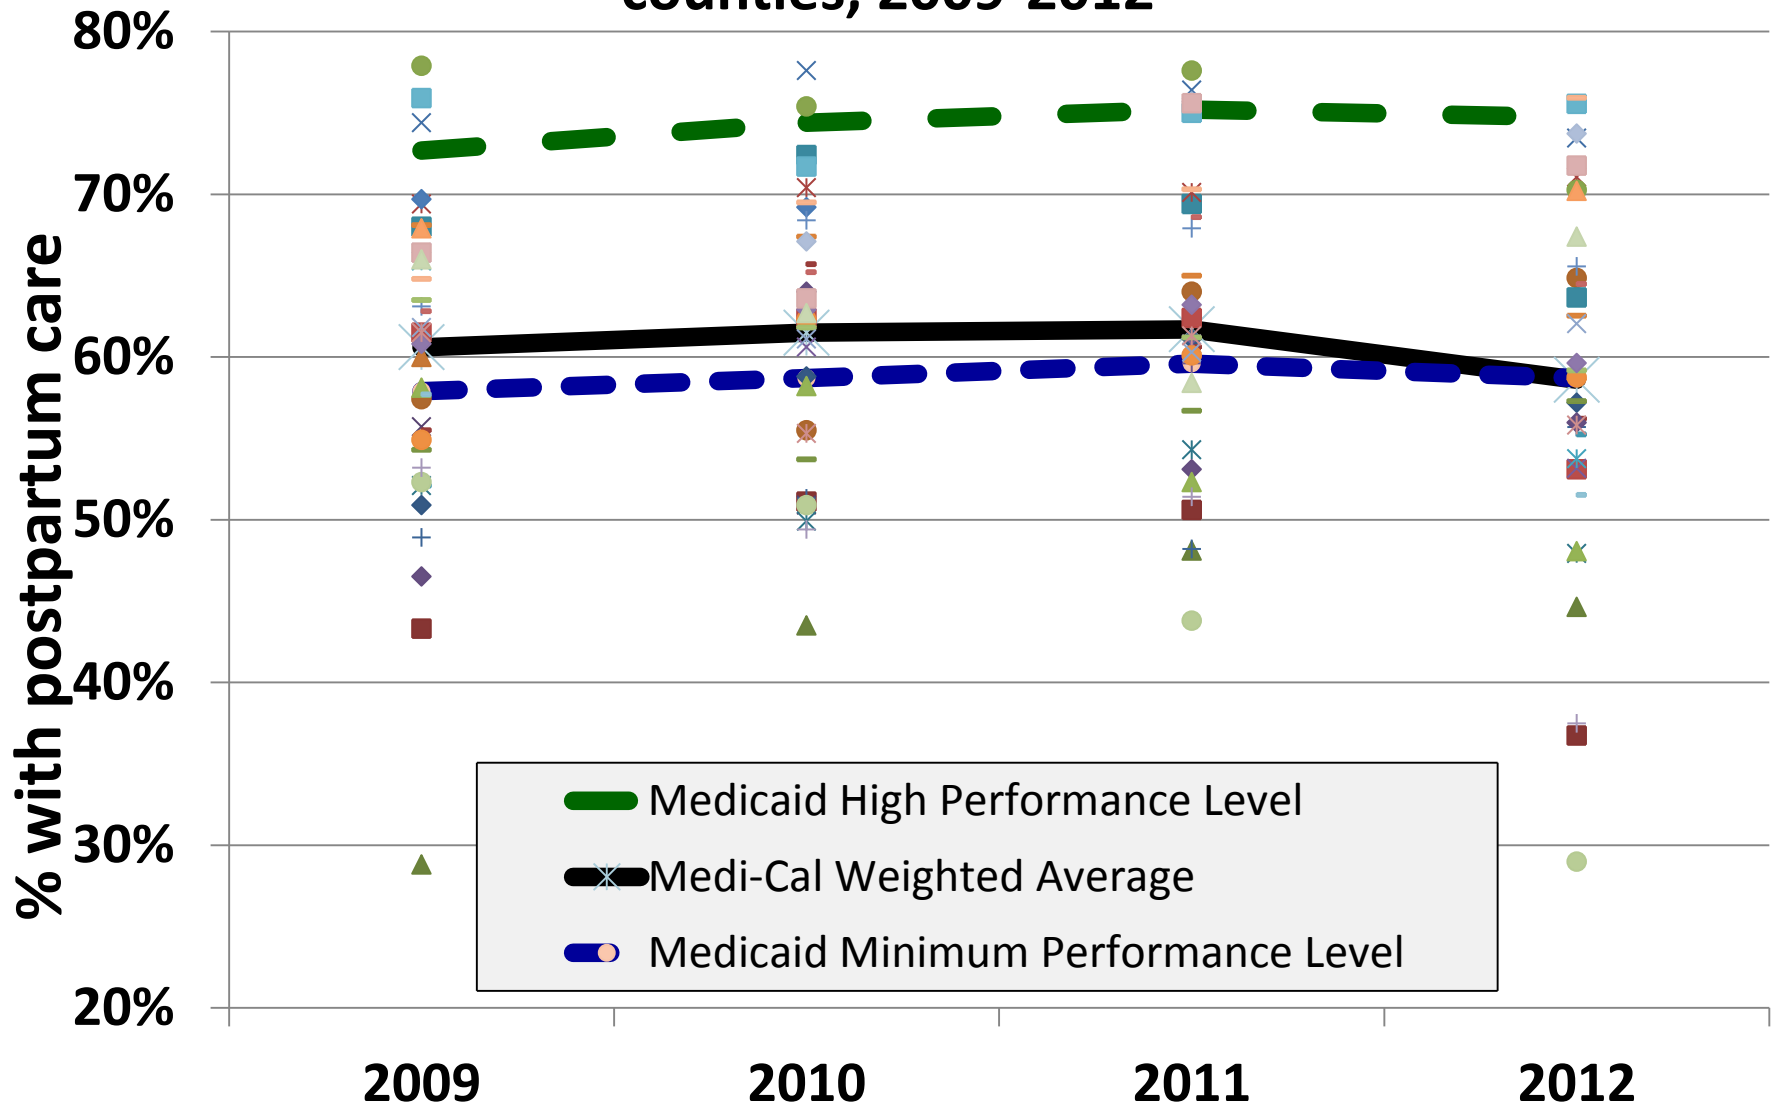

- Breast feeding
- Screening for postpartum depression
- Follow-up of medical problems managed during pregnancy (e.g., gestational diabetes)
- Contraception
- Physical exam/Cervical cytology screening

Data before the AMQG

- Healthcare effectiveness data information set (HEDIS)
- Reported by managed care plans
- Aggregate level data
- Validated by an external quality review organization (EQRO)
- Perform at Minimum Performance Level (MPL)

Proportion of postpartum women with visit 21-56 days after delivery, Medi-Cal Managed Care Plan-counties, 2009-2012

Source: Adapted from

http://www.dhcs.ca.gov/dataandstats/reports/Documents/MMCD_Qual_Rpts/HEDIS_Reports/CA2012_HEDIS.pdf

A deeper look into postpartum care

- Comparative analysis: Information Management Division and Family PACT
- Use of MIS/DSS data warehouse
 - Claims/Encounter
 - Eligibility
 - KICK (Maternal Supplemental Payment)

Stratifications

Race/ethnicity

Plan type (Fee for service vs. managed care)

Primary language

Rural/urban

SSI status

Diabetes status

Global codes

AMQG Data Limitations/Assumptions

- No dedicated delivery date field
- Administrative only
- Global OB codes

Summary of analyses

- EQRO (hybrid) 59% vs. DHCS rates (admin) 42%
- Most deliveries in managed care were to English- speaking women
- Including global codes increases rates
- African American women have lowest postpartum care rates, with wide variation
- Women with diabetes have higher rates of postpartum care

Percentage of Medi-Cal Women with Timely Postpartum Care, by Race/Ethnicity, 2012

Source: OFP/UCSF, 2014
(PRELIMINARY)

Percentage of African American Women with timely postpartum visits, by 6 largest Medi-Cal Managed Care Plans

Source: OFP/UCSF, 2014
(PRELIMINARY)

We have the data, let the QI begin

- QI instruction led by Institute for Population Health Improvement (IPHI)
- Team members
- QI 101 and beyond
- Managers and Supervisors

Team Aims

Medi-Cal weighted average of HEDIS postpartum care measure to 62% by measurement year 2015

percentage of Medi-Cal health plan/counties above the MPL of postpartum care measure to 75% by measurement year 2015

percentage of African-American women with timely postpartum care to 35% by measurement year 2015

AIM

Increase Medi-Cal weighted average of PPC measure to 62% by measurement year 2015

Primary Drivers

Members

Data

Providers

Managed Care Plans

State (DHCS)

Secondary Drivers

Transportation

Culture

Performance Measurement

Member contact info

Guideline adherence

Global billing-lack of incentive

QI resources

Pregnancy Notification

TA to plans

Data feedback to plans

Interventions: Managed Care Plans

- Review of Quality Improvement Projects and Improvement Plans
- In-home visits
- Gap reports
- Targeted interventions: P4P
- Incentives
- Provider report card

DHCS Interventions/Levers

1. Investigation/evaluation
2. Convene/engage
3. Standards
4. TA
5. Outreach
6. Incentives/disincentives
7. IT standards and processes

Next Steps

Many Thanks to the DHCS Maternal Health Team
